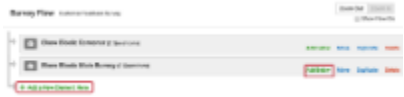
You can authenticate your Qualtrics survey respondents as MIT users using Touchstone. To do so you must set up a "Shibboleth SSO Authenticator" for your survey in the Survey Flow. Please follow the instructions listed below to learn how to do that.

Qtip: This SSO type may not function properly with Preview Survey.

TO SET UP A SHIBBOLETH AUTHENTICATOR

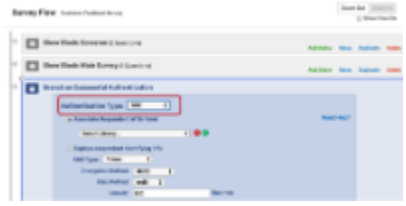
1. Navigate to the Survey tab and open the **Survey Flow**.

2. Click **Add a New Element Here**.



3. Select **Authenticator**.

4. Change **Authentication Type** to **SSO**.



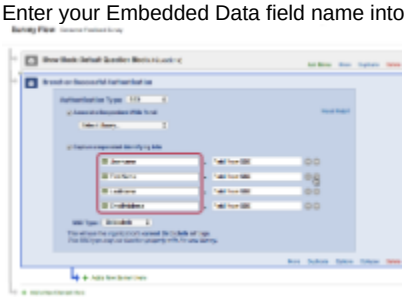
5. Change **SSO Type** to **Shibboleth**.

6. Click **Save Flow**.

TO CAPTURE IDENTIFYING INFORMATION (OPTIONAL)

1. Enable **Capture respondent identifying info** and click **Add Embedded Data**.

2. Enter your Embedded Data field name into the “Embedded Data to Set…” text entry box on the left of the equals sign.



3. Insert the formal or friendly names of the attributes that are being passed via SAML into the “Field From SSO” text entry box (you can click the plus sign to add additional fields).
    a. For MIT the values you can use are:

Field	Attribute Name	Friendly Name
Username	urn:oid:1.3.6.1.4.1.5923.1.1.1.6	eduPersonPrincipalName
First Name	urn:oid:2.5.4.42	givenName
Last Name	urn:oid:2.5.4.4	sn
Email Address	urn:oid:0.9.2342.19200300.100.1.3	mail

4. Configuration of SSO embedded data

5. Results of embedded data

Note that the user name is scoped to the MIT domain, the email address may differ depending on each users configuration.

6. Click **Save Flow**.

7. You will now see the Embedded Data values in the response results.
