Requisitioner authorization needed to display requisitions in Atlas

Requisitioner authorization needed to display requisitions in Atlas

I am trying to view a requisition in Atlas, using the Find Requisition feature, but I get an Access Denied error. How can I obtain authorization to view requisitions?

Answer

The Requisitioner authorization is needed in the Roles database in order to be able to view requisitions.

Your DLC's financial primary authorizer can request that for you by sending an email to the Central Authorizers at business-help@mit.edu.

If you don't know who your primary authorizer is, the IS&T Service Desk can look that up for you.
