What can I do as the site administrator?

What can I do as the site administrator?

Return to Drupal Cloud Landing Page

The person who requests a site using their Kerberos credentials is the **Site Administrator** and has a certain set of privileges. Other individuals may be granted some or all of the privileges of the Site Administrator.

Answer:

As site administrator you can:

- add and edit content
- change the look and layout of your site
- add to or change functionality
- add new users and assign roles

More advanced options for an administrator include the ability to:

- add new roles
- add content types
- enable and use modules
- create views
