How do I quote text in articles?

Q: How do I quote text in articles?

Answer

The quote style is specified by wiki markup. Simply put the `{quote}` markup tag on each side of the text you want included in the quote area. In the examples below you can see the wiki markup and the resulting box it creates.

Example `{quote}` wiki markup:

```
{quote}
 Photoshop 12.0.1 update for Photoshop CS5
    Updates cannot be installed on keyed products using the Adobe Application Manager. Please
contact your Sassafras Administrator for more information.
{quote}
```

Resulting `{quote}`:

> *Photoshop 12.0.1 update for Photoshop CS5*
> *Updates cannot be installed on keyed products using the Adobe Application Manager. Please contact your Sassafras Administrator for more information.*
