About Background Images

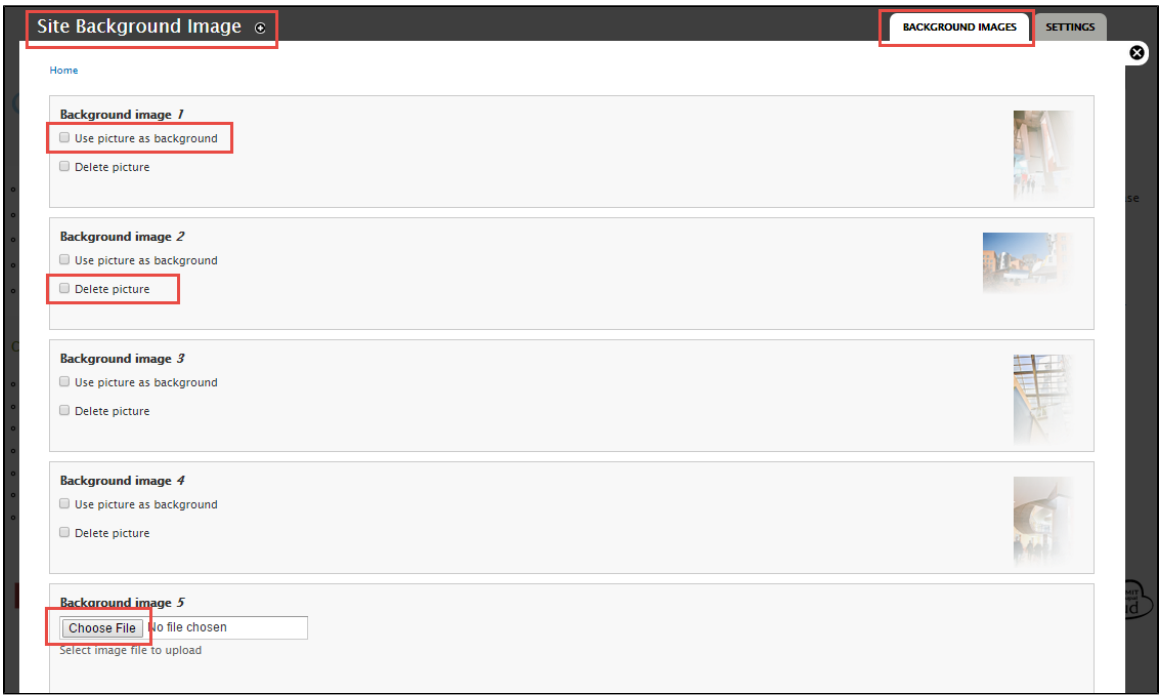
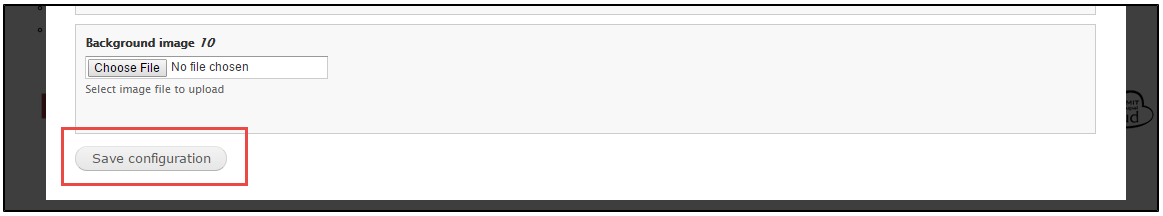
Drupal offers you a number of "starter" background images which you can use. You can also upload your own images to use. When choosing images for your site background keep these few things in mind.

- 1200x900 is a good size for a background image
- reduce the resolution if the image loads slowly
- reduce the opacity or increase the transparency so the image does not compete with the content
- choose images which don't contrast or interfere with the content

Adding a Background Image

1. Click **Configuration**, then **User interface**, then **Dynamic background**.
2. Click the **Background images** tab.
3. Locate one of the stock Drupal Cloud background images to use.
4. Click *Use picture as background*.
5. Click **Save configuration**.





Adding Your Own Background Image

Adding a new image is done in two steps. First you must upload the new image and then you can select it. Each step requires that you click *Save configuaration*.

1. Find a row with no image and click *Choose file*.
2. Locate the image on your computer or server.
3. Select the image and click **Open**.
4. Click **Save configuration**.
5. Click *Use picture as background* for the image you just uploaded.
6. Click **Save configuration**.

Deleting a Background Image

1. Locate the row with the image you wish to delete.
2. Click *Delete picture*.
3. Click **Save configuration**.
