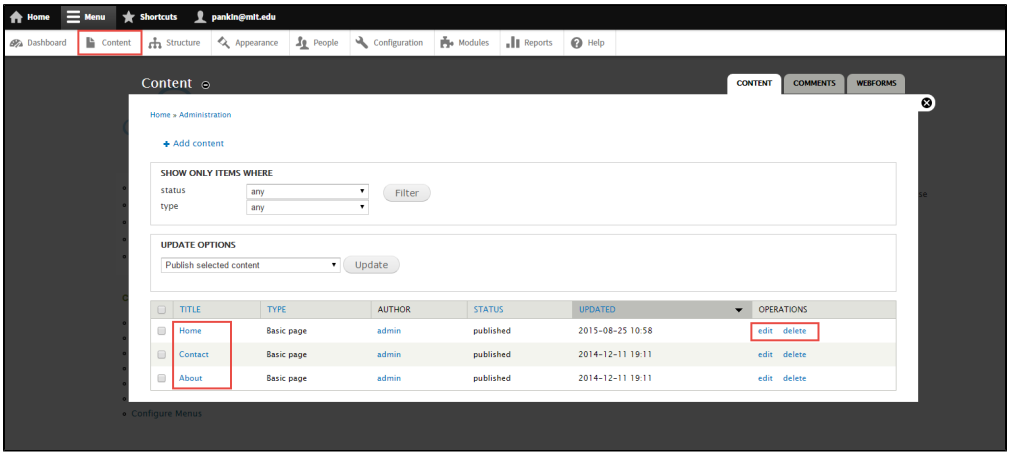
How do I view a list of my Drupal site's pages?

Question: How do I view a list of my Drupal site's pages?

Return to Drupal Cloud Landing Page

Answer:

Click **Content** on the **Admin menu**.



This *Content* page has a list at the bottom of all your content pages. From here you can do a number of things.

- click the title to open the page (helpful if there is no menu link to the page)
- click **edit** to open the page for editing
- click **delete** to delete your page

> ⚠ You may wish to hold off on deleting pages. Later on you may decide you need the page. Be sure to remove it from your menu.

At some point you may have many pages. This Content overlay page has options for filtering the pages you view. You can also select multiple pages by clicking the checkbox. You can then perform an operation on multiple pages in one step.
