About Duo Two-factor Authentication

What is Duo?

Duo is a two-factor authentication system that requires both a credential (certificate, username/password) and a registered thing you have (smartphone, tablet, yubikey) to “Approve” system access to applications that require Touchstone Authentication.

By default, every time a website prompts you to login via Touchstone, you will get a Duo prompt to approve the login. This is usually once per day, or whenever you restart your web browser. If you prefer to be prompted less frequently, the Duo login page has a “Remember this device” checkbox. If this option is selected, you will not be prompted again for 30 days. For more information, see: Duo Remember My Device for 30 Days FAQ.

Who is required to use Duo?

As of June 15, 2016 Duo is required for the entire MIT community including students, faculty, staff and affiliates.

What devices can I use with Duo?

Do I need a smartphone with a data plan? No.

There are several ways you can authenticate via Duo. No smartphone or data plan is required. IS&T recommends setting up at least two in case your registered device is lost or stolen.

- A push notification sent to your smart phone or tablet with the free, IS&T Recommended Duo Security Mobile app (available for iOS, Android, BlackBerry and Windows Phone).
- An SMS message sent to your cell phone (not supported with some international numbers)
- A phone call made to your cell phone
- A phone call made to a landline
- By entering a one-time code generated by the Duo Mobile app (Android or iOS or a YubiKey. )
  - Good for traveling or when cell coverage is poor.

What services use Duo authentication?

Services that use Touchstone. These include:

- VPN
Registering Devices

In order to leverage Duo's two-factor authentication system, you must first register your device(s) with MIT Duo at https://duo.mit.edu.

IS&T recommends registering at least two (2) devices. In case your device is lost or stolen, the second device will allow you to login to Duo, deactivate the lost device, and configure the replacement.

Authenticating

Using Two Factor Authentication

- How do I login to MIT services that leverage Duo two-factor authentication?
- How do I authenticate with a YubiKey?

Traveling with Duo

Before you travel, it's important to think about how you'll use Duo on the road. If your smartphone won't work where you're going, you may want to request a yubikey or install the IS&T Recommended Duo Security Mobile app (available for iOS, Android, BlackBerry and Windows Phone), so you can generate a one-time passcode.

- How do I prepare for traveling with Duo?

Lost/Stolen Device or Changed Phone Number

What should I do if my Duo registered device is lost, stolen or I change my phone number?

You should immediately deactivate the device. If you have another registered device, use that to login to https://duo.mit.edu, deactivate the lost/stolen/changed device, and register the replacement.

- What do I do if my duo enabled device is lost, stolen or I changed my phone number?

If your only Duo-registered device is lost/stolen or you have changed phone numbers, you will need to contact IS&T to verify your identity and get your account reset. See: Get Help.

Troubleshooting

- Touchstone Duo Error - Remember device for 30 days - cookie error
- Why can't I select Remember for 30 Days when using DUO?
- My account has been locked out due to excessive authentication failures.
- I get a blank grey box instead of my push options when trying to authenticate with duo. What do I do?

Get Help

For additional assistance with Duo, troubleshooting, lost/stolen devices, or any other Duo issues, contact the Service Desk.

⚠️ Account resets for lost/stolen devices or changed phone numbers require identity verification. You will need to bring or provide proof via a valid photo ID (MIT ID, government issued ID card, driver's license, passport, etc).
