Delete MIT Personal Certificates in Firefox

WARNING: If you have used S/MIME for email encryption, you should export certificates, in order to retain a backup copy, before deleting them from the browser. How can I tell if I've used S/MIME for email encryption?

1. Open Firefox Preferences
   a. Open Preferences from the 3 bars in the upper right.
   b. Open Preferences from menu path:
      - On Windows: Tools > Options (or Firefox > Options)
      - On Linux: Edit > Preferences
      - On Mac OS X: Firefox > Preferences

2. Select the Advanced pane. Then select the Certificates tab.
3. From **Your Certificates**, click **View Certificates**.

4. Select the expired or duplicate certificate and click the **Delete** button. You will be prompted if you want to delete the certificate. Click **OK** to continue.
5. Close and re-open Firefox, and confirm that you have one, non-expired certificate.

**Note:** You also want to empty your browser cache after deleting your certificate.
