What do the 'Set all CO items as VR' and 'Set all TT items as VR' buttons mean?

This feature allows you to set all items in a group (either cost object group or transaction group) to Visual Review (VR). This feature can be used instead of individually selecting each line as VR when the user has a long list of transactions that they are comfortable with and have no issues. However, this 'Set all...' feature will not set any highlighted transactions (Review Items and High Risk) to VR since a Detail Review (DR) must be done for these transactions to ensure proper backup/documentation.
