How can I get rid of page numbers in LaTeX?

You can easily eliminate page numbers either throughout your entire document, or only on selected pages.

**Entire document**

In order to prevent page numbers from appearing on the pages of your LaTeX document, you should include the line

\begin{verbatim}
\usepackage{nopageno}
\end{verbatim}

after your \texttt{documentclass} line.

This will prevent page numbers from being printed on all of the pages.

**Selected pages**

If you wish to just prevent page numbers from printing on one page, you should put the line

\begin{verbatim}
\thispagestyle{empty}
\end{verbatim}

in the text of the page you want to be printed without a page number.
