How do I limit my search to a Knowledge Base space?

Q: How do I limit my search to a Knowledge Base space?

Context

- The Knowledge Base and its help system
- I want to limit my Knowledge Base search to a single space

Answer

- You can use special syntax in the search box to limit your search
- The syntax to limit the search to a single space is `spacekey: key` where `key` is the space key identifying the space
- To limit your search to a single space, you need to know the "space key" of the space
- Some of the space keys in the Knowledge Base are:

<table>
<thead>
<tr>
<th>Key</th>
<th>Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>hd</td>
<td>Help Desk Internal space (IS&amp;T access only)</td>
</tr>
<tr>
<td>glossary</td>
<td>Glossary of IT Terms (public)</td>
</tr>
<tr>
<td>istcontrib</td>
<td>IS&amp;T Contributions space (public)</td>
</tr>
<tr>
<td>mitcontrib</td>
<td>MIT Community Contributions (public)</td>
</tr>
</tbody>
</table>

Examples

To search for the term "Apple Mail" only in the mitcontrib space, you would enter the following in the search box:

```bash
spacekey:mitcontrib Apple Mail
```
