"cannot resolve network address for KDC in requested realm" - Certificate or Kerberos ticket acquisitions

In trying to obtain an MIT personal certificate or Kerberos tickets, I enter my username and hit OK or Submit, but I receive the following error:

```
cannot resolve network address for KDC in requested realm
```

### Solution

- One cause of this error may be that you are your full email address, such as "johnsmith@mit.edu".
  - Instead, type only the username, such as "johnsmith".
- Another possible cause of the error will be if there is no network connectivity.
  - Check whether you are able to browse the web, such as [http://web.mit.edu](http://web.mit.edu) and [http://google.com](http://google.com).
- Make sure Kerberos for Windows or Kerberos Extras for Macintosh are up to date, using the most recent version:
  - [Kerberos for Windows](http://web.mit.edu)
  - [Kerberos Extras for Macintosh](http://web.mit.edu)
- The realm should be ATHENA.MIT.EDU. Please note the capitalization.
- If you continue to receive the error, contact the IS&T Help Desk, at (617)253-1101, or helpdesk@mit.edu.
