

Outlook Web App auto complete feature is missing

Outlook Web App auto complete feature is missing

I am using the new Outlook Web App and when I address an email, or invite, auto-complete no longer appears.

Answer

Your list of recently used addresses (the auto-complete feature) will be empty initially, because the list that you had in the older version of Outlook Web Access is not available due to the upgrade. As you use the new Outlook Web App, your list will start to contain addresses.
