How do I encrypt traffic between FileMaker Server and FileMaker Pro?

Q: How do I encrypt traffic between FileMaker Server and FileMaker Pro?

To enable SSL encryption between FileMaker Pro and FileMaker server, follow the instructions below.

Note: This information is accurate for FileMaker Server 16. Certain settings and features may differ for prior versions.

Enable SSL Encryption

- 1. Open the FileMaker Server Admin Console.
- 2. In the left navigation bar, click on **Database Server**.
- 3. In the Database Server pane, click the Security tab.
- 4. Under SSL Connections, check the box for Use SSL for database connections.
- 5. Under HTTP Strict Transport Security (HSTS), check the box for Use HSTS for web clients.
- Click Save at bottom.
- 7. For SSL encryption to take effect, you must stop and restart FileMaker Server:
 - In the left navigation bar, select Status.

Custom SSL Certificate

In conjunction with enabling SSL encryption, you should also request and install a custom SSL certificate on the server machine. For details, see FileMaker Server SSL Certificates
