Jamf Pro - Extension Attributes

Jamf Pro - Extension Attributes

Jamf Pro has many "extension attributes" which provide additional information to your computer inventory screen. Jamf Pro has several extension attributes IS&T has set up to help you better manage your Macintosh computers in your environment.

Add Extension Attributes to Your Inventory

- Each extension attribute needs to be added to your inventory screen. Do this following these steps:
  - Log into Casper. Click on the **gear** in the upper right hand corner.
  - Click **Computer Management** on the left hand side.
  - Click **Inventory Display** and click **edit** at the bottom.
  - Click on the **Extension Attributes** tab. Check the boxes for any extension attribute you might want.
  - Click **Save**.
  - Click **Computers** at the top and do a search. You will now see any fields you added.

EUC Specific Extension Attributes

- Code42 - Last Backup
- Code42 - Space Used on Destination
- Code42 - Status
- Code42 - Username
- Code42 - Version
- Crowdstrike Connection Status
- Crowdstrike Version
- Spirion Version
- IPV4 Address
- Sophos AV Version
- Sophos Central Group
- Sophos Last Update
- Sophos Kexts - Note: Only applies to legacy Sophos versions on macOS Big Sur
- Sophos Quarantined Threats - Note: Only applies to legacy Sophos versions

For the complete list log in to Jamf Pro and review.
