[Have Questions or Still Need Help?](#)

### Overview

Protecting your mobile devices involves more than just putting a [password/pin](#) on them. You can also set up remote wipe, geolocation services, and get your laptops/tablets registered and tagged.

- For more information on securing your data, see [Information Protection @ MIT](#).

### How to set up Remote Wipe

#### iOS

- [\[archive:How to remotely Find Lock or Erase your iOS device via iCloud\]](#)

#### Android

- [Find Lock and Erase a Lost Android Device](#)

### Tagging

Laptops and other small electronic devices can be tagged with the STOP tag. This loss prevention measure is a visual deterrent to stealing electronic devices. Laptop tagging is now FREE for the MIT community, and is offered at the IS&T Service Desk at the Atlas Center in E17-106.
