## **Preventing Ctrl-M in Shell mode**

## **Preventing Ctrl-M in Shell mode**

To prevent "^M" from appearing at the ends of lines in emacs shell mode, run these two commands:

```
unset lineedit edit
stty nl -echo
```

You can also have this done automatically every time you start up a shell mode buffer by having a file called ~/.emacs\_tcsh with this line in it:

unset lineedit edit; stty  $\operatorname{nl}$  -echo
