Installing SAS JMP or JMP Pro 12, SAS Simulation Studio 13.1

Installing SAS JMP or JMP Pro 12, SAS Simulation Studio 13.1

On this page:

> ⓘ   These versions of JMP incorporate a license key good until 07/14/2017 (with a subsequent 90 day grace period).

Windows JMP/JMP Pro

Unzip **WINJMP122.zip** or **WINJMPPRO122.zip** in a temporary location. Move to the **JMP/JMP/12_2/Windows** folder (JMP) or the **JMP/JMP_Pro/12_2/Windows** folder (JMP Pro) in the unzipped installer archive and run **setup.exe** to run the installer. Install to the default location, and pick the desired installation options on the following screen (the defaults are usually appropriate), then proceed with the installation. There may be an optional dialog to register the software.

Windows SAS Simulation Studio

You must install **JMP** or **JMP Pro** first in order to run **SAS Simulation Studio**. Unzip **SIMSTUDIO-13.1-WIN.zip** in a temporary location. The installer combines 32 and 64 bit versions and will automatically select the correct one for your platform.

You will need to install the license file manually in a specified directory due to a bug in the installer. As Administrator, Create the following folder path if it doesn't exist already: **C:\Program Files\SASHome\licenses**. From the root of the unzipped archive, copy file **sid_files\SIMSTUDIO...Win_Wrkstn.txt** to the **licenses** folder.

Move to the root of the unzipped archive and run **setup.exe**. Select a language and click *OK*. Select *Install SAS software*, click *Next*.

On the *Select Products to Install* screen, leave *Products to install* on top line as *SAS Foundation and related software* and check product *SAS Simulation Studio* (the only choice), click *Next*. Keep the default setting on the *Specify SAS Installation Data File* screen, click *Next*. Pick appropriate language in *Select Regional Settings*, click *Next* and *Next* on the following screen, then click *Start* on the *Deployment Summary* screen. Click *Next* when done, then *Finish*.

On first time launch, run **SAS Simulation Studio** as Administrator. Dismiss the *SAS Simulation Studio configuration data not specified* dialog if this pops up. On the next dialog, select the binocular icon and enter **C:\Program Files\SASHome** for the SASHOME path if this is not already preset. Select *JMP Data Table* as default data format (unless you want this to be *SAS Data Set* for some reason). If you're not intending to work with a remote SAS Workspace server, you can leave the next section blank. After you click *OK* the **SAS Simulation Studio** GUI will open. On subsequent launches you can run **SAS Simulation Studio** as an ordinary user.

A copy of the user guide (**simsug.pdf**) is in the **simstudio** top-level folder of the unzipped archive.

Note: If you want to uninstall **SAS Simulation Studio** later, use *Uninstall SAS Software* in the **SAS Deployment Manager**.

Macintosh JMP/JMP Pro

If you are installing **JMP** or **JMP Pro** on a machine where one of these has already been installed, delete the following files if they exist already:

/Users/*<your username>*/Library/preferences/com.sas.jmp* (filenames starting with **com.sas.jmp**)
/Users/*<your username>*/Library/Application Support/JMP/Session.jsl

Unzip **MACJMP122.zip** or **MACJMPPRO122.zip** in a temporary location. Move to the **JMP/JMP/12_2/Macintosh** folder (JMP) or the **JMP/JMP_Pro/12_2/Macintosh** folder (JMP Pro) in the unzipped installer archive and launch **JMP-12.dmg**, then launch **JMP 12.pkg** (JMP) or **JMP Pro 12.pkg** (JMP Pro) in the window that opens. Run the installer, keeping the default install location and installation options (you will need to enter the administrator password). There may be an optional dialog to register the software during the installation.

If you get a popup stating **This copy of JMP is unlicensed, or the license is expired** when you launch JMP, click **Open License** and navigate to the **sid_files** folder in the top level directory in the temporary location where you unzipped the installation archive and select the file **JMP122...txt** in that folder. Optionally enter personalization information on the following dialog and click **OK**. You should get another dialog stating **the license has been accepted**. Click **OK** to terminate the installation.

If on launch the splash screen displays:

Organization: <Unknown>
Administrator: this license is temporary

you'll need to perform a manual license update:

1. Launch **JMP** or **JMP Pro**. From the **File** menu, choose **New > New Script** to open a script window.
2. Enter this one line of scripting: **renew license();**
3. From the **Edit** menu, choose **Run Script**.
4. In the resulting *Renew Your JMP License* dialog, click *Open License*.
5. At the prompt, navigate to the **sid_files** folder in the temporary location where you unzipped the installation archive and select the **JMP122...txt** file, click *Choose*.
6. In the *Personalize Your JMP License* dialog, enter an Administrator Name and Department if you desire, click *OK*. You should then see a popup dialog stating *Your license has been accepted. Thank you.* Click *OK*.
