

Matlab startup error - key generator out of range

Q: Matlab startup error - key generator out of range

Question: What does it mean if Athena Matlab doesn't start and gives an error: "Key generator out of range"?

Context

- Athena unix computer
- running Athena matlab that has been protected with Athena's wrap/unwrap tools

Answer

For the Matlab installed on Athena Unix computers, this usually means the clock on the local machine is not set correctly.

Check your clock settings and/or re-synchronize the clock.
