Preventing Ctrl-M in Shell mode

Preventing Ctrl-M in Shell mode

To prevent "^M" from appearing at the ends of lines in emacs shell mode, run these two commands:

```
unset lineedit edit
 stty nl -echo
```

You can also have this done automatically every time you start up a shell mode buffer by having a file called ~/.emacs_tcsh with this line in it:

```
unset lineedit edit; stty nl -echo
```
