

How to find information about a computer in a Workgroup

How to find information about a computer in a Workgroup

I'm in a Workgroup with other computers. How can I find information about other computers in the same Workgroup?

Context

Windows

Solution

1. Start up the command prompt (Go to **Start > Run**, type in cmd and click **OK**).
2. In the command prompt type in:

```
nbtstat -a "computer name"
```

This command should return the MAC address of the computer that uses this NetBIOS name.

The output looks like this:

```
Wireless Network Connection 2:  
Node IpAddress: [18.152.5.66] Scope Id: []
```

```
NetBIOS Remote Machine Name Table  
-----  
Name                Type                Status  
-----  
PCS-GX280           <20>  UNIQUE            Registered  
PCS-GX280           <00>  UNIQUE            Registered  
WORKGROUP           <00>  GROUP             Registered  
MAC Address = 00-11-43-1D-94-92
```
