

Accessing the MIT Exchange server via the IMAP protocol

Q: Accessing the MIT Exchange server via the IMAP protocol

These are not the standard native exchange instructions for connecting your device to MIT Exchange email. These are a workaround for users who need IMAP protocol functionality not provided by the native Exchange environment. If you are looking for the native MIT Exchange instructions, see: [istcontrib:MIT Email Setup Landing]

On this page:

Generic Configuration Info

The generic information for configuring any IMAP-capable client to connect to the Exchange server is as follows (note that some clients may not require you to explicitly select all these settings).

IMAP Server	imap.exchange.mit.edu
Port	993
Security Type	SSL
Authentication	Password

Outgoing Server	outgoing.mit.edu
Port	465 or 587
Security Type	SSL
Authentication	Password

Platform-specific instructions

iOS:
[Set up MIT Exchange on your iOS device]

Pine/Alpine:
