

Debathena development

Debathena development

Development stalled

As of 2022, the current athena.dialup install is based on Ubuntu 18.04, with largely vendor packages; most of the below information is obsolete.

All Debathena packages are available in [Git](#) . Each package is in its own repository in the [mit-athena team on Github](#) . To checkout all the Debathena sources, run

```
git clone git://github.com/mit-athena/debathena/ athena
git submodule init
git submodule update
```

Debathena is a project of the [MIT Student Information Processing Board](#) . The project is currently maintained by [Geoffrey Thomas](#) ([geofft](#)), [Liz Denys](#) ([lizdenys](#)), and Ben Kaduk ([kaduk](#)) in collaboration with the Athena release team at IS&T, including Bob Basch and Andrew Boardman and coordinated by Jon Reed. Previous maintainers, who remain involved to various extents, include founders [Anders Kaseorg](#) ([andersk](#)) and [Tim Abbott](#) ([tabbott](#)), Evan Broder ([broder](#)), and Greg Price ([price](#)). See the [history page](#) for more information.

You can report bugs using our [public bug tracker](#) , or contact the Debathena developers by emailing debathena@mit.edu. You can also reach us on Zephyr `-c sipb -i debathena`.

Debathena uses the Linux kernel's Signed-off-by procedure for external contributions to the project. If you send us a patch, please [sign off] on the patch.
