Why do I get "Bad configuration option gssapikeyexchange" after upgrading macOS?

Q: Why do I get "Bad configuration option gssapikeyexchange" after upgrading macOS?

• After upgrading macOS and attempting to run ssh, you may see an error message like:

dhcp-18-111-116-122:~ username\$ ssh username@athena.dialup.mit.edu /Users/username/.ssh/config: line 2: Bad configuration option: gssapikeyexchange /Users/username/.ssh/config: terminating, 1 bad configuration options

or

/etc/ssh/ssh_config: line 20: Bad configuration option: gssapikeyexchange
/etc/ssh/ssh_config: terminating, 1 bad configuration options

How do I fix this?

Context

• You have a pre-existing .ssh/config or /etc/ssh/ssh_config file, possibly with a GSSAPIKeyExchange no setting that was previously required

Answer

Remove or comment out lines containing GSSAPIKeyExchange

Steps

For Unix neophytes here are steps to edit the ssh_config file using the vi editor on Mac:

sudo vi /etc/ssh/ssh_config

- 1. Press i key for vi editor insert mode.
- 2. Use arrow keys to navigate to lines you want to delete or comment. For example, to comment the offending line in an ssh_config script:

GSSAPIKeyExchange yes

3. Press esc

4. Type Shift-z-z to write the file

update 9/11/2019

Comment the following lines in /etc/ssh/ssh_config from

 System-wide defaults set by MIT Kerberos Extras Host * GSSAPIAuthentication yes GSSAPIDelegateCredentials yes GSSAPIKeyExchange yes to System-wide defaults set by MIT Kerberos Extras #Host *
 #GSSAPIAuthentication yes
 #GSSAPIDelegateCredentials yes
 #GSSAPIKeyExchange yes
