

# How do I limit my search to a Knowledge Base space?

## Q: How do I limit my search to a Knowledge Base space?

### Context

- The Knowledge Base and its help system
- I want to limit my Knowledge Base search to a single space

### Answer

- You can use special syntax in the search box to limit your search
- The syntax to limit the search to a single space is `spacekey:key` where *key* is the space key identifying the space
- To limit your search to a single space, you need to know the "space key" of the space
- Some of the space keys in the Knowledge Base are:

Key	Space
<code>hd</code>	Help Desk Internal space (IS&T access only)
<code>glossary</code>	Glossary of IT Terms (public)
<code>istcontrib</code>	IS&T Contributions space (public)
<code>mitcontrib</code>	MIT Community Contributions (public)

### Examples

To search for the term "Apple Mail" only in the mitcontrib space, you would enter the following in the search box:

```
spacekey:mitcontrib Apple Mail
```
