# How do I limit my search to a Knowledge Base space?

## Q: How do I limit my search to a Knowledge Base space?

### Context

- The Knowledge Base and its help system
- I want to limit my Knowledge Base search to a single space

### Answer

- You can use special syntax in the search box to limit your search
- The syntax to limit the search to a single space is `spacekey:`*`key`* where *`key`* is the space key identifying the space
- To limit your search to a single space, you need to know the "space key" of the space
- Some of the space keys in the Knowledge Base are:

| Key | Space |
|---|---|
| **hd** | Help Desk Internal space (IS&T access only) |
| **glossary** | Glossary of IT Terms (public) |
| **istcontrib** | IS&T Contributions space (public) |
| **mitcontrib** | MIT Community Contributions (public) |

### Examples

To search for the term "Apple Mail" only in the mitcontrib space, you would enter the following in the search box:

```
spacekey:mitcontrib Apple Mail
```
