How do I make a title page for my document?

How do I make a title page for my document?

You need to specify the title and author of the document between the `\documentclass` and `\begin{document}` commands of your paper. Then, after the `\begin{document}` command, you should include the `\maketitle` command.

For example:

```
\documentclass{report}
 \title{This is the Title}
 \author{This is your name}
 \begin{document}
 \maketitle
 (the text of your paper)
 \end{document}
```

By default, the titlepage will include the date on which you latex'd the paper. If you want to override that with a date of your own, put the line

```
\date{Your Date Here}
```

along with the \title and \author lines.

If you're using the report documentclass, the title page will be printed as a separate page; if you're using the article documentclass, the title will be printed at the top of the first page of text.
