How can I use formatting (bold, italic, etc) in Zephyr on Athena?

Q: How can I use formatting (bold, italic, etc) in Zephyr on Athena?

Answer

Zephyr allows you to use formatting commands inside "zwrite" messages. The following commands are available:

1. @b or @bold: bold type
2. @i or @italic: italicized type
3. @l or @left places text flushleft
4. @r or @right places text flushright
5. @c or @center centers text
6. @huge produces "huge" text
7. @large produces large text
8. @medium produces medium text
9. @small produces small text
10. @beep() causes it to beep once

Note: After giving the command, you'll need to enclose the text in delimiters. You may use ( ), { }, [ ], or < >.

For example:

```
@b[This is some text]
```

would produce the following:

This is some text
