

How can I customize my .zwgc.desc?

How can I customize my .zwgc.desc?

You can control the look of the windowgrams you receive by creating a file called ".zwgc.desc". You can copy the default .zwgc.desc file into your directory by doing:

```
cp /usr/athena/share/zephyr/zwgc.desc ~/.zwgc.desc
```

You then need to change the permissions on this file so that you can edit it by typing:

```
chmod u+w ~/.zwgc.desc
```

(You can find out more about the chmod command by typing: man chmod) You may then modify your .zwgc.desc as you wish. There are samples of certain modifications (saving all windowgrams to a file, filtering out certain instances, etc.) available, in the zephyr locker

```
attach zephyr
cd /mit/zephyr/attic/examples
```

You can make the changes take effect immediately by typing:

```
zctl wg_read
```

There are also some examples in the dotfiles locker. To get to those, do:

```
attach dotfiles
cd /mit/dotfiles/Zwgc.desc
```

Then follow the same steps above for viewing these files.
