

How do I uninstall the Mac Pharos client?

Q: How do I uninstall the Mac Pharos client?

Answer

The Mac Pharos ("Popup") client ships with its own uninstaller. Uninstalling the software is recommended if you leave MIT, or before installing a new version of the software.

To uninstall it, navigate to `/Library/Application Support/Pharos/Utilities` in the Finder, and double-click on the icon labeled **Uninstaller**. Once the Uninstaller launches, select **Popup** in the list of programs to uninstall. You will be prompted for your administrative password in order to completely uninstall the software.
