How can I reset my MIT Google account password?

How can I reset my MIT Google account password?

If you know your current password

We are currently testing single sign-on with Google Apps. You will soon be able to use MIT Touchstone to log in, at which point you will not need to change your Google Apps password anymore. In the meantime, please follow the link below to change your MIT Google Apps password:

- **Change your MIT Google Apps password**
  (https://accounts.google.com/b/1/EditPasswd?hl=en&continue=https://www.google.com/settings/u/1/security)

If you are prompted to log in, enter your MIT Google Apps account name, including the `@mit.edu`. *Reminder: your MIT Google Apps account name is most likely* `username-google@mit.edu` *, where* `username` *is your MIT Kerberos username*

On the next page, enter your current MIT Google Apps password, choose a new one, and click **Save**.

If you do not know your current password

Google does not have a native feature for self-service password resets for current versions of Google Apps for a domain. Until MIT finishes integration work with on-campus directory and authentication services, your password will need to be manually reset. This can be done over email. Please send email requesting a password reset to:

- google-help@mit.edu

from your MIT email address. We will reset your password and send a temporary password to your MIT account. You can use this password to log into Google Apps for MIT.EDU, where you will be prompted to change your password to something only you know.
