

User Macro Header Comments

User Macro Header Comments

- When you create a Confluence user macro for The Knowledge Base, include the following comments as a header.
- Modify the lines following Settings:, as needed, to reflect the specific details for that macro.

```
## Macro Name:  
## Purpose:  
## $Author$  
## $Date$  
## Settings:  
## Macro has a body  
## Convert macro body wiki markup to HTML  
## Macro generates HTML markup  
##
```

Note: The \$Author\$ and \$Date\$ variables will populate with your kerberos name when checking the macro into the Knowledge Base macro library on Athena, using RCS.
