

MECM - SCCM - Viewing Sophos Data in the Console

MECM - SCCM - Viewing Sophos Data in the Console

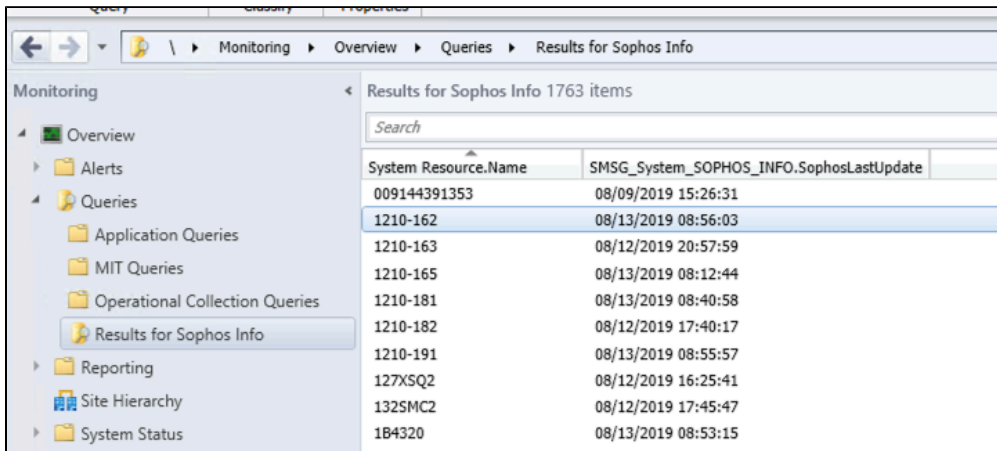

Starting July of 2021, IS&T has migrated to a new version of Sophos called Sophos Central. MIT users have until the summer of 2022 before the old version will stop receiving updates. This page references the legacy version of Sophos. You can see documentation for the new Sophos Central [here](#) and download the newest version of Sophos [here](#).

Sophos data for your machines is viewable in the MECM console. This is made available via a custom hardware inventory class. To view the data, simply run the query located under **Monitoring->Queries->MIT Queries->Sophos Info**. This will help determine if your computers are getting Sophos updates properly.

The results should look similar to the image below.
