# Why am I unable to use Chrome with SAP on macOS 11.x (Big Sur)?

Q: Why am I unable to use Chrome with SAP on macOS 11.x (Big Sur)?

Answer

There is a known issue with Chrome not being fully supported on macOS 11.x (Big Sur) with MIT's current version of Unified Rendering in SAP. If you experience issues running SAP Web Dynpro transactions using Chrome, select a different default browser.

1. From the Apple icon in the upper left corner of your screen, follow the menu path: System Preferences, then click the General tab.
2. From the drop-down list to the right of the words "Default Web Browser", you should see a list of all web browsers installed on the machine. Select Safari or Firefox as the default browser.

3. Close the General window.
