How can I get rid of page numbers in LaTeX?

How can I get rid of page numbers in LaTeX?

You can easily eliminate page numbers either throughout your entire document, or only on selected pages.

Entire document

In order to prevent page numbers from appearing on the pages of your LaTeX document, you should include the line

```
\usepackage{nopageno}
```

after your \documentclass line.

This will prevent page numbers from being printed on all of the pages.

Selected pages

If you wish to just prevent page numbers from printing on one page, you should put the line

```
\thispagestyle{empty}
```

in the text of the page you want to be printed without a page number.
