## Overview

Cisco's AnyConnect Secure Mobility Client is a Virtual Private Network (VPN) client used to create a secure connection to MITnet.

When your machine is connected to the VPN, it is firewalled from all incoming connections. IS&T has updated MIT firewall rules to prevent these connections originating from the MIT network.

## Key Features

- Provides a consistent user experience across devices, both on and off campus.
- Defends users and devices against threats.
- Gives the user highly secure access to the enterprise network, from any device, at any time.

## How to Obtain

To download Cisco AnyConnect VPN, visit the [IS&T Cisco AnyConnect Secure Mobility Client page](#).

- Windows [istcontrib:Install and Run Cisco's AnyConnect client for VPN connectivity on Windows including Duo]
- Mac OS [istcontrib:Install and Run the Cisco AnyConnect client for VPN connectivity on Mac OS X including Duo]
