How do I make PDF files open in Adobe instead of preview in firefox on a Mac?

How do I make PDF files open in Adobe instead of preview in firefox on a Mac?

Problem

Client wants to open PDF files in Acrobat within Firefox instead of in Preview.

When she clicks on a PDF file, the only option to open with is Preview. Client has latest versions of both, and installed Acrobat after Firefox.

Solution

1. Open a PDF in Firefox. At the *Open with* dialogue, click on the **Automatically open with this setting...** checkbox.
2. Close Preview.
3. From the menu bar of Firefox, click **Firefox > Preferences** and go to the Applications tab..
4. In the window that appears, select the **pdf** extension and click on the action
5. In the drop down that appears, select **Acrobat**.
6. Exit out of the preferences. Now, whenever a PDF is clicked, it will automatically open in Adobe instead of Preview.
