What can I do with my MIT Dropbox account that I can't with my personal account?

Q: What can I do with my MIT Dropbox account that I can't with my personal account?

Answer

There are some useful features that, at the time of this writing (August 2014), are only available in your MIT Dropbox account:

- **Single Sign On** - Authenticating via MIT's Touchstone eliminates the need to input a password on Dropbox's website.
- **Passwords for shared links** - Currently in early release to Dropbox for Business accounts, you can now set a password for a shared link to provide more security. More information is available here.
- **Expirations for shared links** - Another feature currently in early release to Dropbox for Business accounts, an expiration date can be set for shared links. More information is available here.
