CrashPlan (Formerly Code42) Landing Page

On Monday, May 15, computers at MIT that meet the vendor's system requirements and are running version 10.4.1 of the Code42 software will be automatically updated to CrashPlan version 11.

This update requires macOS users whose machines are not managed by IS&T to grant full-disk access to the CrashPlan application in order to continue backing up successfully. This is a one-time change. Instructions are provided in the Knowledge Base. See: [Enable Full Disk Access for MacOS Applications \(Including CrashPlan\)](#)
