## last updated: 9/1/08 by: othomas
## This macro takes one parameter, severity, of the form green, yellow, or red to
## indicate the severity or impact of a current event or outage, by
## changing its border and title background colors accordingly. The
## default color is green. If the body is empty, it will display the
## general section from 3down. Ideally, it would figure out whether there
## is content in that section, and maybe pick up a color tag from it.
#if($paramseverity == "red")
