Overview

One of the easiest ways to avoid exposing information you don't need anymore, including administrative and research data, is to destroy it.

For moderate and high risk information, observe applicable data retention policies upon project completion. Securely delete the information by means that make it impossible to reconstruct the records. Also destroy devices that contained high risk data in ways that make it impossible to recover.

If you must retain a copy of moderate or high information, ensure that it remains secure.

- For more information on how to classify and secure your data, see [Information Protection @ MIT](#).
