Policy Logs & JSS Dashboard

You can review the logs of any policy by clicking the logs button located at the bottom of the policy screen. Logs will show the date and time the policy was run and if it Completed or Failed under Status. Selecting **Show** under Actions will provide further details. Selecting **Flush** under Actions will clear the logs so the policy can be run again.

Showing 1 to 10 of 18 entries

First Previous 1 2 Next Last Show 10 entries

Computer	Username at login/logout	Date/Time	Status	Actions
		Yesterday at 10:57 AM	Completed	Flush Show
		09/07/2016 at 11:20 AM	Completed	Flush Show
		09/13/2016 at 1:55 PM	Completed	Flush Show
		09/08/2016 at 11:24 AM	Completed	Flush Show
		09/01/2016 at 10:09 AM	Completed	Flush Show
		Yesterday at 2:20 PM	Completed	Flush Show
		09/02/2016 at 10:22 AM	Completed	Flush Show
		09/06/2016 at 9:37 AM	Completed	Flush Show
		09/09/2016 at 11:28 AM	Completed	Flush Show
		09/12/2016 at 9:48 AM	Completed	Flush Show

First Previous 1 2 Next Last Show 10 entries Flush All Flush All Errors Done

Information can also be added to the JSS Dashboard to allow you quickly keep track of how policies are performing or to quickly access smart group details. This is done by checking the Show in JSS Dashboard box within any policy or smart group.

Show in JSS Dashboard ☒

Computer starts up. A startup script that checks for policies must be configured in the JSS for this to work

er logs in to a computer. A login hook that checks for policies must be configured in the JSS for this to work

er logs out of a computer. A logout hook that checks for policies must be configured in the JSS for this to work

ork State Change

computer's network state changes (e.g. when the network connection changes, when the computer name changes, when the changes)

ment Complete

ly after a computer completes the enrollment process

ing Check-in

rring check-in frequency configured in the JSS

m

m event

quency

which to run the policy

by

which to run the policy (e.g. "/Volumes/Restore/"). The policy runs on the boot drive by default

Done History Logs Clone Delete Edit

To access the JSS Dashboard click the icon always available in the upper left of the Casper Console.

Extension Attributes

Various Extension Attributes are available to assist with monitoring. Extension Attributes are custom fields that allow you to collect almost any piece of attribute data from a computer. They are updated with the normal inventory cycle within Jamf Pro. Once inventory is updated, Extension Attributes can be used to create reports and in smart groups for scope. To display all Extension Attribute information for a specific computer, click on the Extension Attributes section when viewing the computer.

Extension Attributes

Extension Attributes

AdobeFlashVersion:
Bash Vulnerability: Patched
Battery Cycle Count: 6
Battery Health Status: OK
Computer Age: MacBook Pro (Retina, 15-inch, Mid 2014)
Computer Sleep: 60
Connected Displays: Color LCD
Core Storage Status: Enabled
CrowdStrike Version: N/A
DEP Enrolled: N/A
Firefox Version: 45.3.0
Firewall: On
Google Chrome Version: Not Installed

They can also be added to your site's inventory display. To add to your Inventory Display, perform the following:

1. Within your DLC site click the Gear Icon in the upper right of the Jamf Pro Console.

2. Select Inventory Display

Inventory Display

3. Choose the section called Extension Attributes where you can select the specific Extensions Attributes you would like to add.
4. Click save at the bottom of the page to save your selections.

Computer Inventory Display

Computer	Hardware	Operating System	User and Location	Purchasing	Storage	Extension Attributes
☒ AdobeFlashVersion ☐ Bash Vulnerability ☐ Battery Cycle Count ☐ Battery Health Status ☐ Computer Age ☐ Computer Sleep ☐ Connected Display Serial Number ☐ Connected Displays ☐ Core Storage Status ☒ CrashPlan PROe - Last Backup						

Once added you can view this information when displaying the list of computers within your site. An example of common software Extension Attributes is below:

Firefox Version	Google Chrome Version	Office 2016 - Outlook Version
45.3.0	53.0.2785.89	15.25

Applications Report

These reports are built into Jamf Pro. Under Computers within your DLC Site you can select Applications from the search drop down. You can enter an application name along with an asterisk (*) as a wild card to display all versions installed on computers within your site for a particular application. This can be very useful when determining which computers need third-party software patching.
