"An SSL connection to the server couldn't be established" error in the Citrix Workspace client for Linux

You may receive an SSL error when you add citrixapps.mit.edu as an account in the Citrix Workspace for Linux client.

This can be fixed by running the following command in the terminal:

```
sudo ln -s /usr/share/ca-certificates/mozilla/* /opt/Citrix/ICAClient/keystore/cacerts
sudo /opt/Citrix/ICAClient/util/ctx_rehash
```
