

Resolve Certificates Issues

Resolve Certificates Issues

The following error messages may indicate that there is no current MIT personal certificate, and/or the presence of an expired MIT personal certificate:

- SSL Connection failed
- Page cannot be displayed
- The client and server don't support a common SSL protocol version or cipher suite. This is usually caused when the server needs SSLv3 support, which has been removed.

This message most often indicates a problem with your [MIT Personal Certificate](#).

- [Test your certificate](#)
- Select your browser for detailed instructions to resolve certificate errors.
- If your certificate test is successful, but you continue to receive the error, contact the [IS&T Service Desk](#)
