Creating Sub Menus for Your Drupal Site

Creating Sub Menus for Your Drupal Site

Return to Drupal Cloud Landing Page

Many sites use a design which shows a horizontal main menu with vertical secondary menu links on the left. The *AdminConnect* site uses this technique.

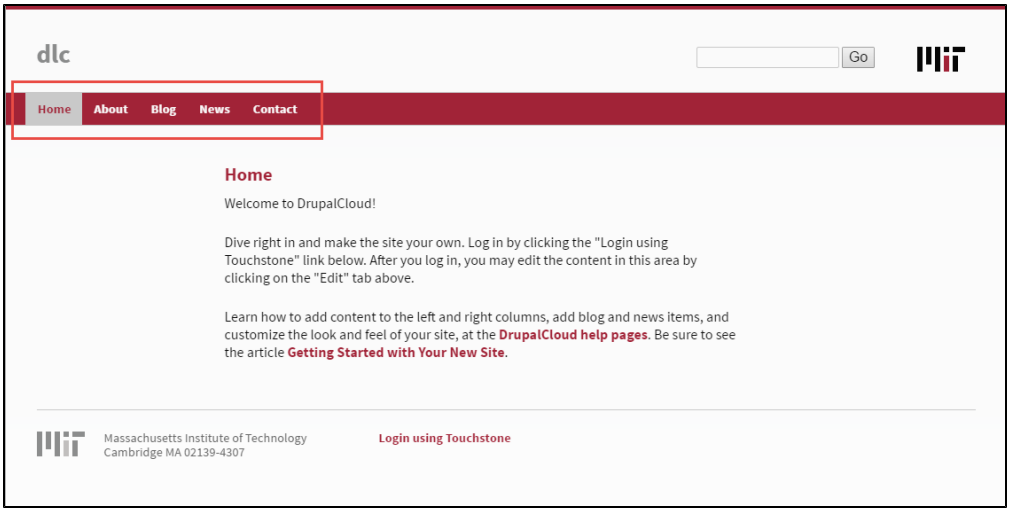

> **Note**
> Instructions differ slightly based on the theme you are using.

On this page:

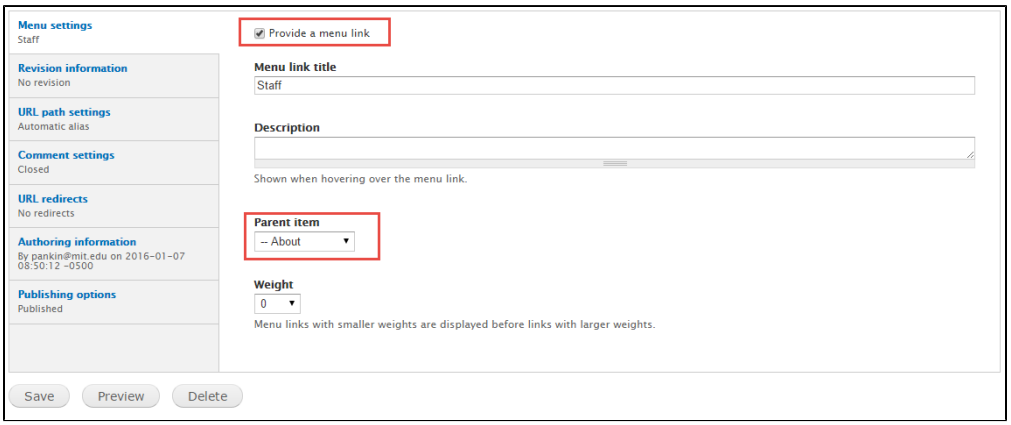

- Instructions for the Default *DLC* Theme
  - Using the Menu Block Module
  - Creating a New Menu Block
- Instructions for the *Adaptive* Theme
  - Making the Menu Horizontal
  - Using the Menu Block Module
  - Creating a New Menu Block

Instructions for the Default *DLC* Theme

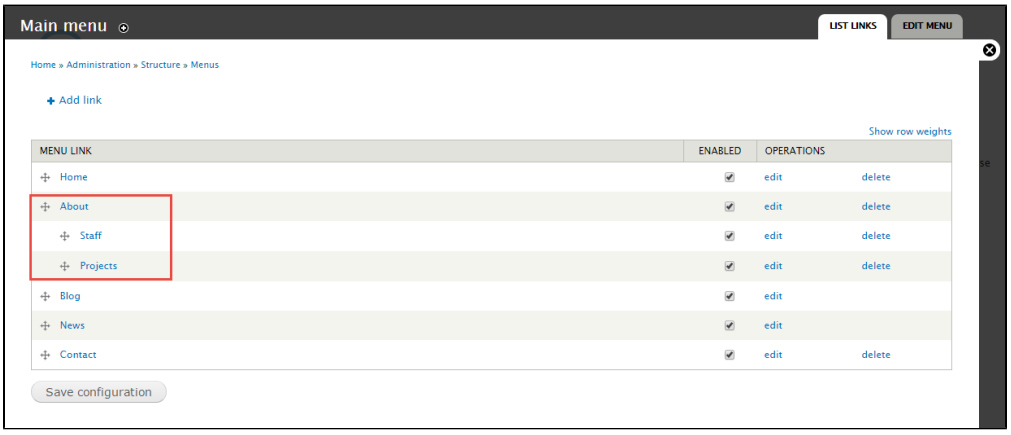

Drupal Cloud uses blocks to hold menu links. There is a default block called **Main menu** which is located on the top, in the *Menu Bar* region.

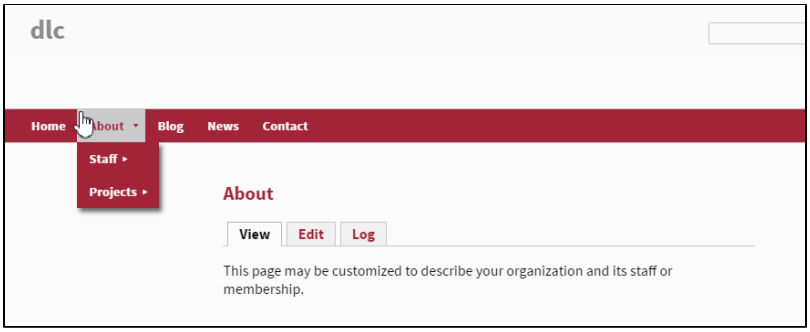

When you add content and generate menu links, make sure the parent is one of the existing menu links (e.g., *About*) and not *Main Menu*.

Here, two new pages have been added. To see and adjust the menu links click **Structure**, then **Menus**, then *list links* next to **Main menu**. You will be on the following page.

To see the submenu (e.g., *Staff*), click on the parent link (e.g., About_) and then hover over the menu link. This is not the final effect we wish to achieve. When we complete the next step the submenu links will appear at the right on the parent page (e.g., *About*).

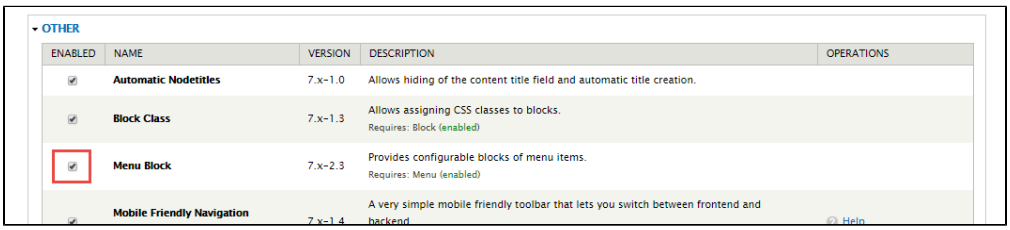

Using the Menu Block Module

The Menu Block module lets you create a new menu block. The new menu block will display the submenu links (e.g., *Staff*, *Projects*) and will only display on their parent page (e.g., *About*). The new menu block also uses the Main menu links but only shows the secondary links from level two and lower. This block is then placed in the Sidebar first region.

To enable the Menu Block Module:

1. From the *Admin menu*, click **Modules**.
2. Scroll to the *Other* group.
3. Click the box to enable **Menu Block**.

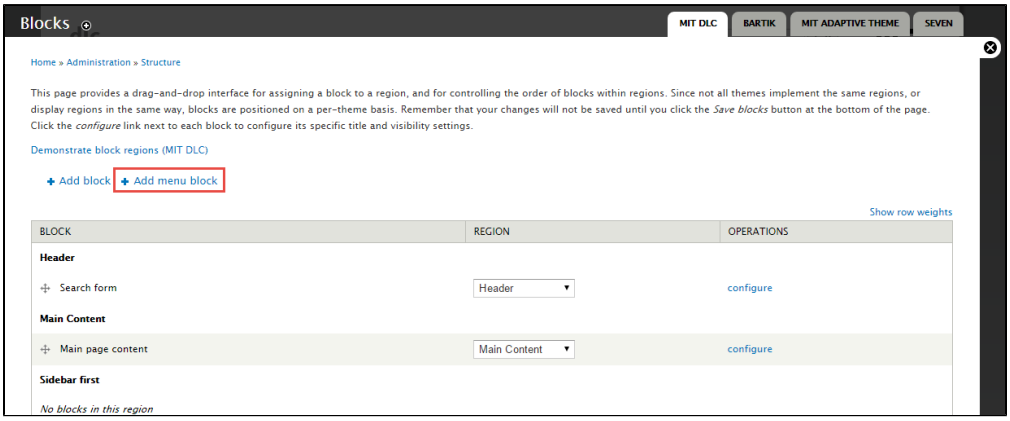

Once a module is enabled it may be used without returning here each time.

Creating a New Menu Block

This process involves creating the block, then choosing a menu to appear in the new block. It begins on the **Blocks** overlay page.

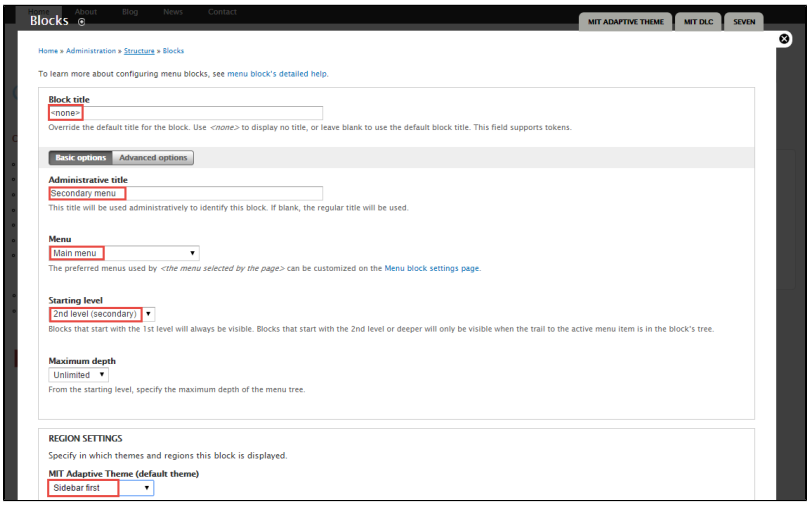

1. From the *Admin menu* click **Structure**, then **Blocks**.
2. Click *+ Add menu block*. The + Add menu block link becomes available once the Menu block module is enabled.

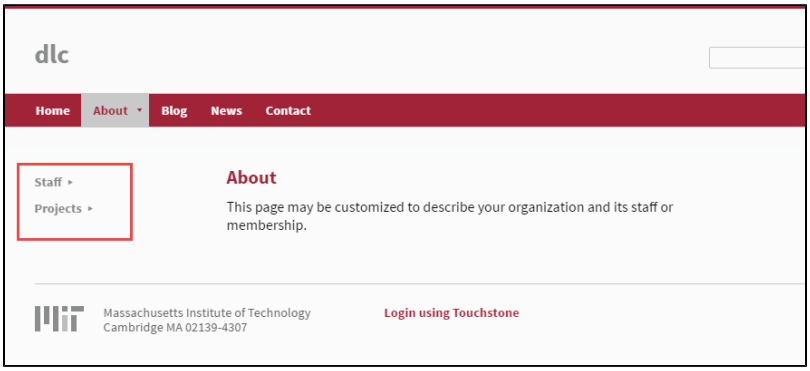

The *Menu block* options screen has many choices. Notice that there is also an *Advanced* set of options. All the options are described below. For more information click the ***menu block's detailed help*** link at the top.

1. Enter a title to appear at the top of the menu or *<none>* for no title.
2. Add an administrative title - especially if you add *<none>* in step one.
3. Choose *Main menu* as the source of the menu links.
4. Choose *Second level* as the **Starting level**.

5. Under *Region settings* choose the *Sidebar first* region. The menu will appear on the left.
6. Click **Save block**.

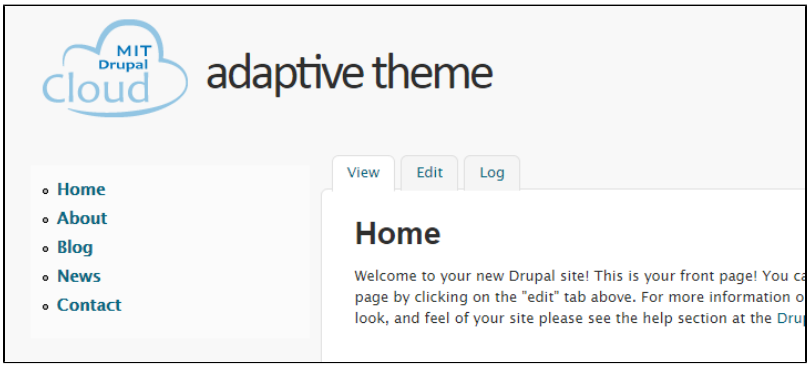

The following screenshot shows the final effect.

Instructions for the *Adaptive* Theme

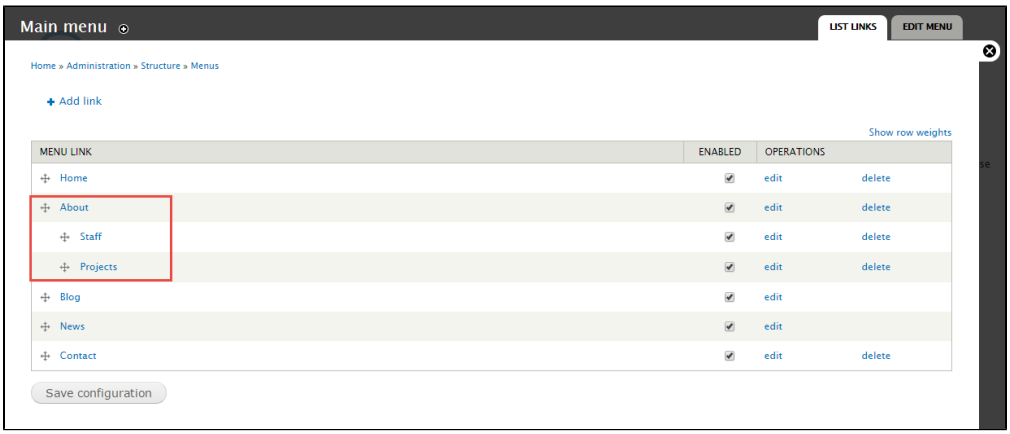

Drupal Cloud uses blocks to hold menu links. There is a default block called **Main Menu** which is located on the left, in the *Sidebar first* region.

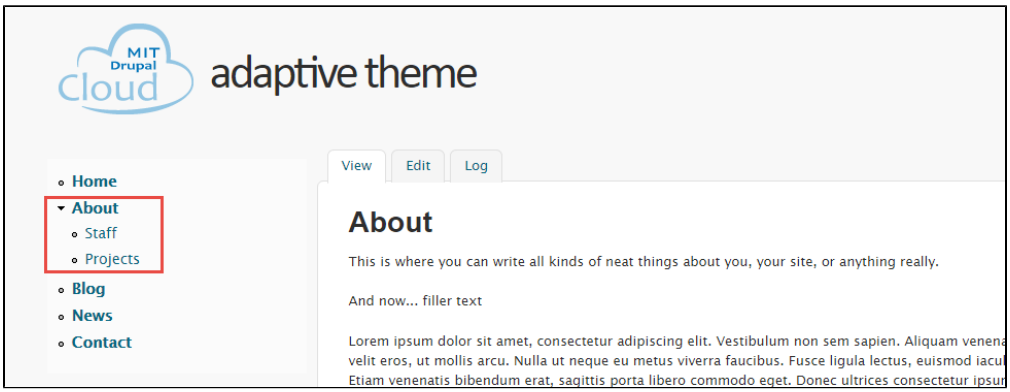

When you add content and generate menu links, make sure the parent is one of the existing menu links (e.g., *About*) and not *Main Menu*.

Here, two new pages have been added. To see and adjust the menu links click **Structure**, then **Menus**, then *list links* next to **Main menu**. You will be on the following page.

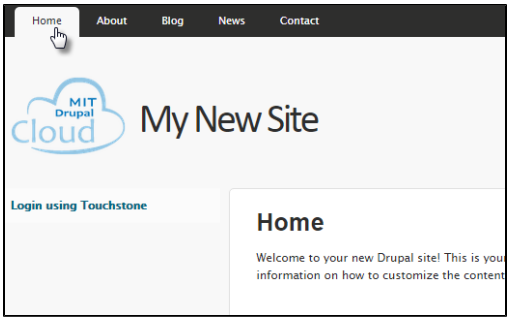

To see the submenu (e.g., *Staff*), click on the parent link (e.g., *About*).

Making the Menu Horizontal

To create the horizontal menu effect, the **Main menu** block is moved from the *Sidebar first* region to the *Menu bar* region. Unfortunately, by moving the Main menu block to the Menu bar region you lose the ability to show sub menu links. Since a block can only be used in one region we will need to create another menu block to place in the *Sidebar first* region. This is where the **Menu block** module comes in handy.

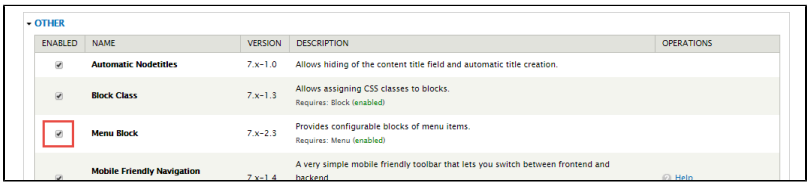

Using the Menu Block Module

The Menu Block module lets you create a new menu block. The new menu block will display the submenu links (e.g., *Staff*, *Projects*) and will only display on their parent page (e.g., *About*). The new menu block also uses the Main menu links but only shows the secondary links from level two and lower. This block is then placed in the Sidebar first region.

To enable the Menu Block Module:

1. From the *Admin menu*, click **Modules**.
2. Scroll to the *Other* group.
3. Click the box to enable **Menu Block**.

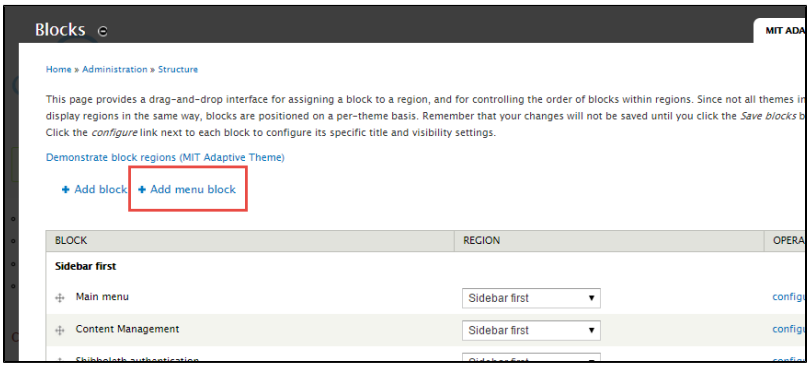

Once a module is enabled it may be used without returning here each time.

Creating a New Menu Block

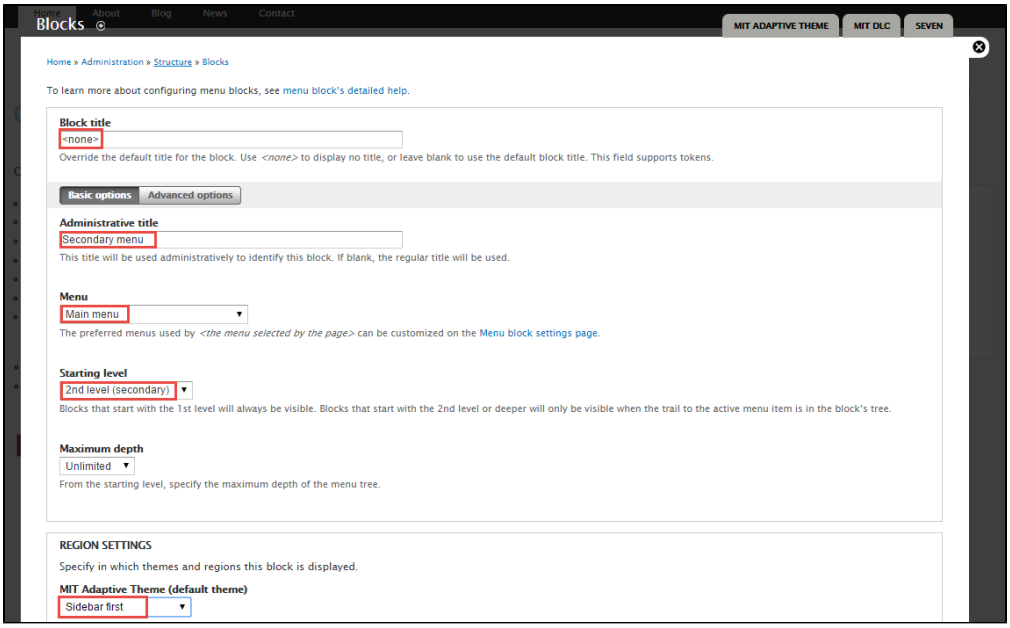

This process involves creating the block, then choosing a menu to appear in the new block. It begins on the **Blocks** overlay page.

1. From the *Admin menu* click **Structure**, then **Blocks**.
2. Click + *Add menu block*. The + Add menu block link becomes available once the Menu block module is enabled.

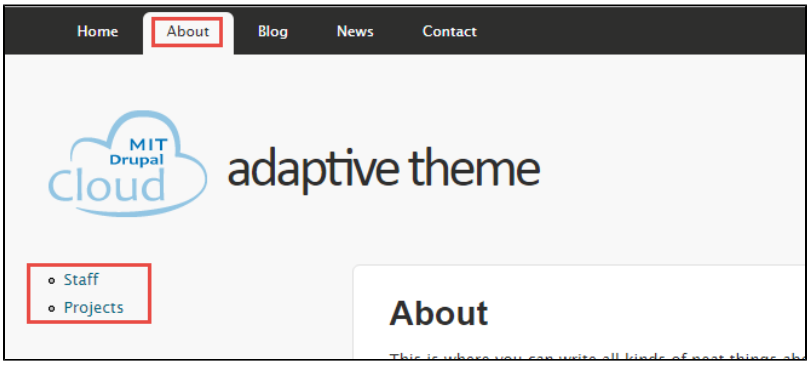

The *Menu block* options screen has many choices. Notice that there is also an *Advanced* set of options. All the options are described below. For more information click the ***menu block's detailed help*** link at the top.

1. Enter a title to appear at the top of the menu or *<none>* for no title.
2. Add an administrative title - especially if you add *<none>* in step one.
3. Choose *Main menu* as the source of the menu links.
4. Choose *Second level* as the **Starting level**.
5. Under *Region settings* choose the *Sidebar first* region. The menu will appear on the left.
6. Click **Save block**.

The following screenshot shows the final effect.
