Deliver two separate web sites on one server

Deliver two separate web sites on one server

It is possible to deliver two web sites on one server however this is not supported by the Help Desk. It's called "virtual hosting." If you plan to set up an Apache-SSL web server, you can read through the steps for setting up virtual hosting by going to:

http://httpd.apache.org/docs/1.3/vhosts/name-based.html

Also, there are examples of common Apache-SSL setups at:

http://httpd.apache.org/docs/1.3/vhosts/examples.html
The Help Desk cannot offer support for Apache-SSL setup and support and virtual hosting setup and support.
