Should I run Code42 backups when I'm off campus?

Should I run Code42 backups when I'm off campus?

It's up to you, but there are some things to consider. Code42 makes regular incremental backups, so it uses a lot of bandwidth to move large amounts of data.

- If your network connection is slow, you or others in your household may notice a performance drop when running Code42.
- Check your networking plan for any limits on data usage or potential overage fees for exceeding them.
- Also, when traveling, check the fine print! You don't want surprise fees at checkout over an incremental backup.
