## Install and Renew Certificates in Safari on Mac OS X

## Install and Renew Certificates in Safari on Mac OS X

This page will guide you through the installation and renewal of certificates for Safari on Mac OS X.

1. Download and launch CertAid 2.

**Note:** Install any updates if prompted. If you receive a message that states "Certaid can't be opened because the identity of the developer cannot be confirmed", please go to this link: Mac OS X - Identity of developer cannot be confirmed *Result*: The *Welcome to CertAid* screen is displayed.

Information Services & Technology	? Continue

**Note:** If CertAid finds one or more existing certificates, you will be asked if you want to delete them. If you have used S/MIME for email encryption, do not delete your certificates. For more information, see Should I Delete My Old or Expired Personal Certificate?. The *Install Your Certificates* window displays the progress of installing the MIT Certificate Authority and your personal certificate. Once these steps are completed, click **Continue.** 

Result. The Identity Preferences screen is displayed.

The *Identity Preferences* window displays the progress of configuring your personal certificate to work with certain certificate-protected MIT websites. Once completed, click **Done**.

## Result: CertAid quits.

The first time you attempt to use your new certificate, you will see this prompt. Click Always Allow.
