

Is there an Emacs mode for MATLAB?

Is there an Emacs mode for MATLAB?

Elisp code for a matlab mode for emacs is located in `/afs/athena/software/matlab/misc/matlab-mode.el`

To use it once, do:

M-x load-file `/afs/athena/software/matlab/misc/matlab-mode.el`

and then in the buffer you want to use matlab mode in,

M-x matlab-mode

If you want this mode to be available whenever you need it, add the following lines to your `.emacs`:

```
(autoload 'matlab-mode "/afs/athena/software/matlab/misc/matlab-mode.el" "Enter Matlab mode." t)
(setq auto-mode-alist (cons '("\\.m\\$" . matlab-mode) auto-mode-alist))
(autoload 'matlab-shell "/afs/athena/software/matlab/misc/matlab-mode.el" "Interactive Matlab mode."
t)
```
