

# How to reset a moira list

## How to reset a moira list

You can clear out a moira list of all entries with the following command:

at an athena command enter:

```
blanche LISTNAME -f /dev/null
```

This sets the list to the contents of a text file at the location /dev/null, which is an empty file. This is easier then deleting people through web-based moira or moira on athena.
